

Abranet[®] Max Flap Disc

High performance without clogging
and surface overheating

Abranet® Max Flap Disc

With a reinforced mesh backing, the unique Abranet® Max Flap Disc delivers high performance without clogging or overheating.

Benefits

- ▶ **High performance.** More material removal in a shorter time.
- ▶ **Excellent surface quality** for subsequent paint application, which eliminates the need for an additional processing step as with traditional flap discs.
- ▶ **Surface temperature control.** By keeping the grinding zone at a low temperature, burns and melting of processed material are avoided, while the necessary aggressiveness in work is maintained.
- ▶ **Minimal clogging** guarantees an even and stable sanding. Reduced wear makes the Abranet® Max Flap Disc last longer than traditional flap discs.
- ▶ **Consistent aggressiveness** throughout the entire grinding process.
- ▶ **Significant savings in both time and money.**

Areas of use

- ▶ **Woodworking and Construction:** wood stripping, incl. resinous wood types with high moisture content, processing of ends and removal of old paintwork from logs (bar) in wooden housing construction.
- ▶ **Metalworking:** aluminum processing, removal of old paintwork and corrosion from metal surfaces, without overheating the surface.
- ▶ **Composite:** grinding of glass fiber, gel coats, carbon fiber and other resinous materials.

Abranet® Max Flap Disc Technicals

Specifications

Abrasive	Abranet Max Flap Disc
Grain	Aluminium Oxide
Color	Brownish
Disc diameter	50 mm / 115 mm / 125 mm
Grit range	P40, P60, P80 and P120

About Abranet® Max mesh

Abranet® Max's unique mesh backing provides excellent cooling of the sanding surface, minimising the risk of overheating. The mesh structure prevents clogging.
