

No more water damage!

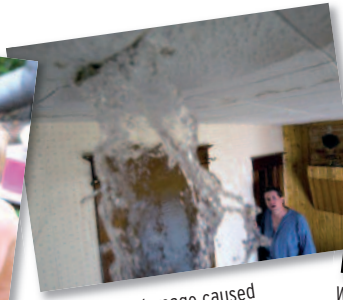

The new Safe-T Combi protects homes against flooding. Quick installation, immediate protection.

Efficient building services

Ooops - somebody forgot the garden hose

Tremendous damage caused by a pipe burst

Waste of water due to leaking pipes

Follow-up costs caused by faulty appliances

Water damage can happen to anyone. SYR's Safe-T Combi offers protection. For sure!

BENEFITS OF THE SAFE-T COMBI

- Offers reliable protection against leakage, prevents water damage and waste of water
- Best price-performance ratio
- Simple and quick installation
- For comfort and safety in single and two-family homes, also suited for the local installation in apartment houses
- Its water filter provides for reliably clean water
- Its integrated pressure regulating system keeps the pressure stable and helps saving water
- Vacation function for intensified monitoring

Minor cause, disastrous effect: a hose is pulled off, a pipe bursts in the water installation. The result: flooded homes, wet walls and tremendous damage. Water damage is a real horror for all home owners. But now, SYR's Safe-T Combi offers efficient protection.

Don't wait until you learn it the hard way!

Be clever and take preventive measures. With SYR's new Safe-T Combi. By the way, it does not always have to be a bursting pipe: faulty flushing tanks, dripping valves or open garden taps can quickly cause additional water costs amounting to several hundreds of Euros. Prevention pays off!

Safe-T Combi - smart and safe

The most modern electronic system of the Safe-T Combi monitors the current water consumption every second. When the sensitive measuring unit records an unusually high consumption or when the individually pre-programmed values are exceeded, the Safe-T Combi immediately isolates the whole installation and thus minimizes the water damage's consequences. The system also offers a special vacation function for carefree holidays.

Water filter and pressure regulator included

Tiny rust particles, metal chips, sand and deposits find their way into the domestic installation along with the drinking water. Without filtration, they may cause pitting and pipe bursts, damage valves and clog aerators. The filter provides for clean water and reliably retains particles. Moreover, the integrated pressure regulating system ensures that the water pressure remains stable, which protects sensitive appliances and valves and may help saving water.

Technical specifications Safe-T Combi

Service pressure	16 bar
Service temperature	max. 30 °C
Medium	potable water
Ambient temperature	10 - 60 °C
Flow rate	max. 3,5 m ³ /h
Connection sizes	DN 20, DN 25, DN 32
Serial number	2421.00.005

Valves from SYR: Quality from Germany
