DSAFP	Concealed-Duct	DSAFP 124 R	DSAFP 164 R	DSAFP 184 R	DSAFP 255 R	DSAFP 365 R	DSAFP 485 R

* For this type of Indoor unit (CAFP), please see the Installation Instructions accompanying the unit

Outdoor Units

GRFP	Outdoor Units	GRFP 255 R, GRFP 365 R, GRFP 485 R
		GRFP 255 L, GRFP 365 L, GRFP 485 L

Refrigerant R410A is used in the outdoor units.

1-1. Unit Specifications

Wall-Mounted Type MAFP125Rx 2 / GRFP255L

MODEL No.		Indoor Unit		MAFP125Rx 2		
		Outdoor Unit		GRFP255L		
POWER SOURCE				220 - 230 - 240 V/1 phase/50/60 Hz		
PERFORMANCE				Cooling		
	Capacity [minimum~maximum]		kW	7.1 [2.2~8.0]		
			BTU/h	24,000 [7,500~27,000]		
	Air circulation (Hi/Me/Lo)		m3/h	1,440/1,200/840 (720/600/420x2)		
	Moisture removal (High)		Liters/h	3.8 (1.9x2)		
ELECTRICAL RATINGS						
	Voltage rating		V	220	230	240
	Available voltage range		V	198 - 264		
	Running amperes*		A	13.3	12.8	12.3
	Max-Running amperes**		A			
	Power input		kW	2.37	2.38	2.38
	C.O.P		W/W	3.00	2.98	2.98
	Max. Starting amperes		A			
FEATURES						
	Controls/Thermostat control			Microprocessor/I.C.thermostat		
	Timer			ON/OFF 72-hours		
	Fan speeds Indoor/Outdoor			3 and Automatic control/Variable		
	Airflow direction (Indoor)			Automatic (Remote control)		
	Air filter			Washable, easy access		
	Remote controller (Option)			Wired : REM HW		Wireless : REM HLAWS
	Refrigerant control			-		
	Drain pump (Drain connection)			(13A , OD18mm)		
	Compressor			Rotary(SANYO)		
	Operation sound	Indoor - Hi/Me/Lo	dB - A	35/31/27		
		Outdoor - Hi	dB - A	47		
	Color (Approximate value)	Indoor		Munsell 3.0Y8.6/0.8		
		Outdoor		Munsell 1Y 8.5/0.5		
REFRIGERANT TUBING						
	Limit of tubing length		m (ft.)	50 (164)		
	Limit of tubing length at shipment		m (ft.)	3~30 (10~98)		
	Limit of elevation difference between the two units		m (ft.)	Outdoor unit is higher than indoor unit : 30 (98) Outdoor unit is lower than indoor unit : 15 (49)		
	Refrigerant tube outer diameter	Narrow tube	mm (in.)	6.35 (1/4)		
		Wide tube	mm (in.)	12.7 (1/2)		
	Refrigerant amount at shipment		kg	R410A - 1.9		
DIMENSIONS & WEIGHT				Indoor unit		Outdoor unit
	Unit dimensions	Height	mm (in.)	285 (11-7/32)		780 (30-23/32)
		Width	mm (in.)	995 (39-6/32)		940 (37)
		Depth	mm (in.)	203 (8)		340 (13- 3 /8)
	Package dimensions	Height	mm (in.)	347 (13-21/32)		888 (34-31/32)
		Width	mm (in.)	1,065 (41-30/32)		1015 (39-31/32)
		Depth	mm (in.)	260 (10-8/32)		409 (16-3/ 32)
	Net weight		kg (lb.)	12 (27)		58 (128)
	Shipping weight		kg (lb.)	15 (33)		67 (148)
	Shipping volume		m³ (cu. Ft)	0.096 (3.4)		0.369 (13.0)

1-1. Unit Specifications

Ceiling-Mounted Type SPAFP255R / GRFP255L

MODEL No.		Indoor Unit		SPAFP255R		
		Outdoor Unit		GRFP255L		
POWER SOURCE				220 - 230 - 240 V/1 phase/50/60 Hz		
PERFORMANCE				Cooling		
	Capacity [minimum~maximum]		kW	7.1 [2.2~8.0]		
			BTU/h	24,000 [7,500~27,000]		
	Air circulation (Hi/Me/Lo)		m3/h	1,100/900/840		
	Moisture removal (High)		Liters/h	3.0		
ELECTRICAL RATINGS						
	Voltage rating		V	220	230	240
	Available voltage range		V	198 - 264		
	Running amperes*		A	13.2	12.7	12.2
	Max-Running amperes**		A			
	Power input		kW	2.36	2.36	2.37
	C.O.P		W/W	3.01	3.01	3.00
	Max. Starting amperes		A			
FEATURES						
	Controls/Thermostat control			Microprocessor/I.C.thermostat		
	Timer			ON/OFF 72-hours		
	Fan speeds Indoor/Outdoor			3 and Automatic control/Variable		
	Airflow direction (Indoor)			Automatic (Remote control)		
	Air filter			Washable, easy access, long life (2,500 hr)		
	Remote controller (Option)			Wired : REM HW	Wireless : REM HLACS	
	Refrigerant control			-		
	Drain pump (Drain connection)			(20A , OD26mm)		
	Compressor			Rotary(SANYO)		
	Operation sound	Indoor - Hi/Me/Lo	dB - A	38/36/33		
		Outdoor - Hi	dB - A	47		
	Color (Approximate value)	Indoor		Munsell 10Y9.3/0.4		
Outdoor			Munsell 1Y 8.5/0.5			
REFRIGERANT TUBING						
	Limit of tubing length		m (ft.)	50 (164)		
	Limit of tubing length at shipment		m (ft.)	3~30 (10~98)		
	Limit of elevation difference between the two units		m (ft.)	Outdoor unit is higher than indoor unit : 30 (98) Outdoor unit is lower than indoor unit : 15 (49)		
	Refrigerant tube outer diameter	Narrow tube	mm (in.)	9.52 (3/8)		
		Wide tube	mm (in.)	15.88 (5/8)		
	Refrigerant amount at shipment		kg	R410A - 1.9		
DIMENSIONS & WEIGHT				Indoor unit		Outdoor unit
	Unit dimensions	Height	mm (in.)	210 (8-9/32)		780 (30-23/32)
		Width	mm (in.)	1,180 (46-15/32)		940 (37)
		Depth	mm (in.)	680 (26-25/32)		340 (13- 3 /8)
	Package dimensions	Height	mm (in.)	280 (11-1/32)		888 (34-31/32)

1-1. Unit Specifications

Ceiling-Mounted Type SPAFP485R / GRFP485L

MODEL No.		Indoor Unit		SPAFP485R			
		Outdoor Unit		GRFP485L			
POWER SOURCE				220 - 230 - 240 V/1 phase/50/60 Hz			
PERFORMANCE				Cooling			
	Capacity [minimum~maximum]	kW	12.5 [2.7~14.0]				
		BTU/h	42,500 [9,200~48,000]				
	Air circulation (Hi/Me/Lo)	m3/h	1,800/1,560/1,320				
	Moisture removal (High)	Liters/h	5.6				
ELECTRICAL RATINGS							
	Voltage rating	V	220	230	240		
	Available voltage range	V	198 - 264				
	Running amperes*	A	21.2	20.3	19.5		
	Max-Running amperes**	A					
	Power input	kW	4.12	4.12	4.12		
	C.O.P	W/W	3.03	3.03	3.03		
	Max. Starting amperes	A					
FEATURES							
	Controls/Thermostat control		Microprocessor/I.C.thermostat				
	Timer		ON/OFF 72-hours				
	Fan speeds Indoor/Outdoor		3 and Automatic control/Variable				
	Airflow direction (Indoor)		Automatic (Remote control)				
	Air filter		Washable, easy access, long life (2,500 hr)				
	Remote controller (Option)		Wired : REM HW	Wireless : REM HLACS			
	Refrigerant control		-				
	Drain pump (Drain connection)		(20A , OD26mm)				
	Compressor		Rotary(SANYO)				
	Operation sound	Indoor - Hi/Me/Lo	dB - A	43/40/37			
		Outdoor - Hi	dB - A	52			
	Color (Approximate value)	Indoor		Munsell 10Y9.3/0.4			
Outdoor			Munsell 1Y 8.5/0.5				
REFRIGERANT TUBING							
	Limit of tubing length		m (ft.)	50 (164)			
	Limit of tubing length at shipment		m (ft.)	5~30 (16~98)			
Limit of elevation difference between the two units			m (ft.)	Outdoor unit is higher than indoor unit : 30 (98) Outdoor unit is lower than indoor unit : 15 (49)			
Refrigerant tube outer diameter	Narrow tube	mm (in.)	9.52 (3/8)				
	Wide tube	mm (in.)	15.88 (5/8)				
Refrigerant amount at shipment			kg	R410A - 3.6			
DIMENSIONS & WEIGHT				Indoor unit		Outdoor unit	
Unit dimensions	Height	mm (in.)	210 (8-9/32)		1230 (48- 7/16)		
	Width	mm (in.)	1,595 (62-25/32)		940 (37)		
	Depth	mm (in.)	680 (26-25/32)		340 (13-3 /8)		
Package dimensions	Height	mm (in.)	280 (11-1/32)		1330 (52-3 /8)		
	Width	mm (in.)	1,670 (65-24/32)		1015 (39-31/32)		
	Depth	mm (in.)	780 (30-23/32)		409 (16-3/32)		
Net weight		kg (lb.)	33 (73)		100 (220)		
Shipping weight		kg (lb.)	37 (82)		109 (240)		
Shipping volume		m ³ (cu. Ft)	0.365 (12.9)		0.552 (19.5)

SOURCE	: 220 - 230 - 240 V, Single Phase, 50 Hz

MODEL	:DSAFP485R
SOUND LEVEL	: HIGH 40 dB(A), NC 33 / LOW 33 dB(A), NC 25
CONDITION	: Under the unit 1.5 m
SOURCE	: 220 - 230 - 240 V, Single Phase, 50 Hz

- REMARKS:**
1. Value obtained in the actual place where the unit is installed may be slightly higher than the values shown in this graph because of the conditions of operation, the structure of the building, the background noise and other factors.
 2. The test results were obtained from an anechoic room.

NOTE

To evaluate the noise level, the maximum value of the measured sound pressure level is used. Read the value at each frequency level (on horizontal axis, center of the sound pressure band) from 63 Hz to 8000 Hz, and select the corresponding maximum value indicated on the vertical axis.

1-9. Indoor Fan Performance

Concealed-Duct Type

If external static pressure is too great (due to long extension of ducts, for example), the air flow volume may drop too low at each air outlet. This problem may be solved by increasing the fan speed using the following procedure:

- (1) Remove 4 screws on the electrical component box and remove the cover plate.
- (2) Disconnect the fan motor sockets in the box.
- (3) Take out the booster cable (sockets at both ends) clamped in the box.
- (4) Securely connect the booster cable sockets between the disconnected fan motor sockets in step 2 as shown in Fig. 1-1.
- (5) Place the cable neatly in the box and reinstall the cover plate.

Fig. 1-1

Indoor Fan Performance

NOTE

HT : Using the booster cable

H : At shipment

Fig. 1-2

How to read the diagram

The vertical axis is the external static pressure (Pa) while the horizontal axis represents the air flow (m^3/minute). The characteristic curves for "HT," "H," "M" and "L" fan speed control are shown. The nameplate values are shown based on the "H" air flow. For the 25 type, the air flow is $18 \text{ m}^3/\text{minute}$, while the external static pressure is 49 Pa at "H" position. If external static pressure is too great (due to long extension of ducts, for example), the air flow volume may drop too low at each air outlet. This problem may be solved by increasing the fan speed as explained above.

1-11. Installation Instructions

■ TUBING LENGTH

(A) Single type

- Keep refrigerant tubing between the indoor and outdoor units as short as possible.
- The length of the refrigerant tubes between the indoor and outdoor units is limited by the elevation difference between the 2 units. During tubing work, try to make both the tubing length (L) and the difference in elevation (H1) as short as possible. Refer to Table 1-5.

Table 1-1

Indoor unit type	71 types	100, 125 types
Maximum allowable tubing length	50 m	50 m
Charge-less tubing length (actual length)	30 m	30 m
Additional refrigerant charge per 1 m	40g	
Minimum tubing length	3 m	5 m

(B) Simultaneous operation multi (Twin, Triple, Double-Twin)

NOTE Because the indoor units run simultaneously, install them within the same room.

Item		Description	Symbol				Actual length (m)
			Single	Twin	Triple	Double-Twin	
Allowable tubing lengths	Maximum allowable tubing length	One-way length of tubing from outdoor unit to the most distant indoor unit	L	$L + \ell 1$ $L + \ell 2$	$L + \ell 1, L + \ell 2$ $L + \ell 3$	$L + \ell 1 + \ell 1, L + \ell 1 + \ell 2$ $L + \ell 2 + \ell 3, L + \ell 2 + \ell 4$	≤ 50
	Maximum distribution tubing length	Maximum length following the first branch point (No. 1 distribution)	—	$\ell 1, \ell 2$	$\ell 1, \ell 2, \ell 3$	$L1 + \ell 1, L1 + \ell 2$ $L2 + \ell 3, L2 + \ell 4$	≤ 15
Maximum branch tubing length		Difference between the maximum length and minimum length in tubing following the first branch point	—	$\ell 1 > \ell 2$ $\ell 1 - \ell 2$	$\ell 1 > \ell 2 > \ell 3$ $\ell 1 - \ell 2$ $\ell 1 - \ell 3$ $\ell 2 - \ell 3$	Max.: $L2 + \ell 4$ Min.: $L1 + \ell 1$ $(L2 + \ell 4) - (L1 + \ell 1)$	≤ 10
Maximum difference between lengths of No. 1 distribution tubing (Double-Twin)			—	—	—	$L2 > L1$ $L2 - L1$	≤ 10
Maximum difference between lengths of No. 2 distribution tubing (Double-Twin)			—	—	—	$\ell 2 > \ell 1$ $\ell 4 > \ell 3$ $\ell 2 - \ell 1$ $\ell 4 - \ell 3$	≤ 10
Maximum allowable height difference	Maximum indoor-outdoor height difference	If outdoor unit is higher	H1				≤ 30
		If outdoor unit is lower	H1				≤ 15
	Maximum height difference between indoor units		—	H2	H2, H3, H4	H2, H3, H4, H5, H6, H7	≤ 0.5

* For connection tubing sizes, refer to table above.

NOTE

- For refrigerant tube branches, use the optional distribution joints.
- For cautions on the use of the optional distribution joints, be sure to refer to the provided instruction sheet. Also, be careful to install them in the correct direction (orientation).

Table 1-2 Tubing Data for Models (Single, Twin, Triple, Double-Twin)

Models		GRFP255L-R	GRFP365L-R	GRFP485L-R
Tubing Data				
Tubing size outer diameter	Narrow tube mm (in.)	9.52 (3/8)	9.52 (3/8)	9.52 (3/8)
	Wide tube mm (in.)	15.88 (5/8)	15.88 (5/8)	15.88 (5/8)
Limit of tubing length (m)		50	50	50
Limit of elevation difference between the 2 units	Outdoor unit is placed higher (m)	30	30	30
	Outdoor unit is placed lower (m)	15	15	15
Max. allowable tubing length at shipment (m)		3 – 30	3 – 30	5 – 30
Required additional refrigerant *1 (g/m)		a) 40	b) 40	b) 40
Refrigerant charged at shipment (kg)		1.2	1.2	1.2

No additional charge of compressor oil is necessary.

*1 If total tubing length becomes 30 to 50 m, charge additional refrigerant by 40 g/m.

Table 1-3 List of Connection Tube Sizes

	Main tubing (L)	Double-Twin distribution tube (L1, L2)	Indoor unit connection tube (ℓ1, ℓ2, ℓ3, ℓ4)	
		Total type capacity of indoor units connected after the branch		
Type capacity of indoor units	25 – 48	25	25 – 48	12 – 18
Wide tube	φ15.88	φ15.88	φ15.88	φ12.7
Narrow tube	φ9.52	φ9.52	φ9.52	φ6.35
Amount of additional charge per 1 m	40 g	40 g	40 g	20 g

Charge with an amount of additional refrigerant calculated using the formula below, based on the values in Table 1-3 and the size and length of the liquid (narrow) tubing.

Amount of additional refrigerant charge (g)

Do not remove refrigerant from the system, even if the result of the calculation is negative. (Use with the current refrigerant charge.)

$$\begin{aligned} \text{Additional refrigerant amount (g)} &= \text{Additional refrigerant for main tubing (g)} + \text{Additional refrigerant for distribution tubing (g)} \\ &\quad - \text{Outdoor unit charge-less refrigerant amount (g)} \\ &= 40X(a) + 40X(b) + 20X(c) - 1200 \quad (25 - 48 \text{ type}) \end{aligned}$$

(a) Actual length (m) of main tubing (φ9.52)

Refrigerant charge per 1 m of actual length = 40 g/m (25 – 48 type)

(b) Total length of distribution tubing (φ9.52)

Refrigerant charge per 1 m of actual length = 40 g/m

(c) Total length of distribution tubing (φ6.35)

Refrigerant charge per 1 m of actual length = 20 g/m

Example

● Sample tubing lengths

L = 35 m ℓ1 = 5 m

L1 = 10 m ℓ2 = 5 m

L2 = 5 m ℓ3 = 5 m

ℓ4 = 10 m

● Find the liquid (narrow) tube size from Table 1-3.

L : φ9.52 (48 type)

L1 : φ9.52 (Total type capacity of indoor units 24)

L2 : φ9.52 (Total type capacity of indoor units 24)

ℓ1 – ℓ4 : φ6.35

● The amount of additional on-site refrigerant charge is found by subtracting the outdoor unit charge-less refrigerant amount from the total charge amount for all tube sizes.

φ9.52 → L : 35 m × 40 g / m = 1400

φ9.52 → L1 + L2 : (10 + 5) m × 40 g / m = 600

φ6.35 → ℓ1 – ℓ4 : (5 + 5 + 5 + 10) m × 20 g / m = 500

Outdoor unit charge-less refrigerant amount –1200

Total +1300

● The amount of additional on-site refrigerant charge is 1,300 g.

CAUTION

1. This unit requires no additional refrigerant charge up to tubing length 30 m. In case of more than 30 m, additional refrigerant charge is required. Refer to Tables 1-2 and 1-3.

2. In case of multi type installation, indoor units should be installed within the same room. If multi type indoor units are installed in different rooms, temperature control may develop problems because thermostat operation must follow the thermostat condition of 1 indoor unit only (the main unit).

WARNING

Always check the gas density for the room in which the unit is installed.

■ Check of limit density

When installing an air conditioner in a room, it is necessary to ensure that even if the refrigerant gas accidentally escapes, its density does not exceed the limit level. If the density might exceed the limit level, it is necessary to set up an opening between it and the adjacent room, or to install mechanical ventilation which is interlocked with a leak detector.

(Total refrigerant charged amount: kg)

(Min. indoor volume where the indoor unit is installed: m³)

≤ Limit density 0.3 (kg/m³)

The limit density of refrigerant which is used in this unit is 0.3 kg/m³ (ISO 5149).

The shipped outdoor unit comes charged with the amount of refrigerant fixed for each type, so add it to the amount that is charged at the field. (For the refrigerant charge amount at shipment, refer to the unit's nameplate.)

Minimum indoor volume & floor area relative to the amount of refrigerant is roughly as given in the following table.

CAUTION

Pay special attention to any location, such as a basement or recessed area, etc. where leaked refrigerant can collect, since refrigerant gas is heavier than air.

■ SELECTING THE INSTALLATION SITE

Indoor Unit

AVOID:

- areas where leakage of flammable gas may be expected.
- places where large amounts of oil mist exist.
- direct sunlight.
- locations near heat sources which may affect the performance of the unit.
- locations where external air may enter the room directly. This may cause “sweating” on the air discharge ports, causing them to spray or drip.
- locations where the remote controller will be splashed with water or affected by dampness or humidity.
- installing the remote controller behind curtains or furniture.
- locations where high-frequency emissions are generated.

DO:

- select an appropriate position from which every corner of the room can be uniformly cooled.
- select a location where the ceiling is strong enough to support the weight of the unit.
- select a location where tubing and drain pipe have the shortest run to the outdoor unit.
- allow room for operation and maintenance as well as unrestricted air flow around the unit.
- install the unit within the maximum elevation difference above or below the outdoor unit and within a total tubing length (L) from the outdoor unit as detailed in Tables 1-1 and 1-2.
- allow room for mounting the remote controller about 1m off the floor, in an area that is not in direct sunlight nor in the flow of cool air from the indoor unit.

Ceiling-Mounted Type

NOTE

The rear of the indoor unit can be installed flush against the wall.

Fig. 1-1

Concealed-Duct Type

Fig. 1-2

Wall-Mounted Type

Fig. 1-3

Outdoor Unit

AVOID:

- heat sources, exhaust fans, etc. (Fig. 1-4)
- damp, humid or uneven locations

DO:

- choose a place as cool as possible.
- choose a place that is well ventilated and outside air temperature does not exceed maximum 45°C constantly.
- allow enough room around the unit for air intake/exhaust and possible maintenance. (Fig. 1-5)
- use lag bolts or equal to bolt down unit, reducing vibration and noise.

Installation space

Distance between obstructions and the unit air inlet and outlet must be as shown below.

Fig. 1-5

Fig. 1-6

CAUTION

- Concerning inlet-side distance "C" (Fig. 1-5)
The minimum for distance "C" is 15 cm if there are no obstructions on the outlet side (wall *1 side) and *2 or *4 is not present. In all other cases, the minimum for distance "C" is 20 cm.
- If the unit is installed with the outlet side facing wall *1, then there must be no obstructions on 2 of the remaining 3 sides: *2, *3, *4.
- If wall *1 is on the outlet side (Fig. 1-5), or if obstructions are present on all 3 sides *2, *3, and *4 (Fig. 1-5), then the minimum distance for "A" and "B" is 2 m (Fig. 1-6). Even if there is no wall on the outlet side, a minimum of 100 cm is required.

In case of multiple installations

- provide a solid base (concrete block, 10 × 40 cm beams or equal), a minimum of 15 cm above ground level to reduce humidity and protect the unit against possible water damage and decreased service life. (Fig. 1-7)
- use lug bolts or equal to bolt down unit, reducing vibration and noise.

Fig. 1-7

■ ELECTRICAL WIRING

● General Precautions on Wiring

- (1) Before wiring, confirm the rated voltage of the unit as shown on its nameplate, then carry out the wiring closely following the wiring diagram.
- (2) Provide a power outlet to be used exclusively for each unit, and a power supply disconnect and circuit breaker for overcurrent protection should be provided in the exclusive line.
- (3) To prevent possible hazards from insulation failure, the unit must be grounded.
- (4) Each wiring connection must be done in accordance with the wiring system diagram. Wrong wiring may cause the unit to misoperate or become damaged.
- (5) Do not allow wiring to touch the refrigerant tubing, compressor, or any moving parts of the fan.
- (6) Unauthorized changes in the internal wiring can be very dangerous. The manufacturer will accept no responsibility for any damage or misoperation that occurs as a result of such unauthorized changes.
- (7) Regulations on wire diameters differ from locality to locality. For field wiring rules, please refer to your LOCAL ELECTRICAL CODES before beginning.
You must ensure that installation complies with all relevant rules and regulations.
- (8) To prevent malfunction of the air conditioner caused by electrical noise, care must be taken when wiring as follows:
 - The remote control wiring and the inter-unit control wiring should be wired apart from the inter-unit power wiring.
 - Use shielded wires for inter-unit control wiring between units and ground the shield on both sides.
- (9) If the power supply cord of this appliance is damaged, it must be replaced by a repair shop appointed by the manufacture, because special-purpose tools are required.

Recommended Wire Length and Wire Diameter for Power Supply System

Outdoor unit

	(A) Power supply		Time delay fuse or circuit capacity
	Wire size	Max. length	
GRFP255L-R	4 mm ²	24 m	25 A
GRFP365L-R	4 mm ²	22 m	25 A
GRFP485L-R	6 mm ²	30 m	35 A

Indoor unit

Type	(B) Power supply	Time delay fuse or circuit capacity
	2.5 mm ²	
MAPF	Max. 150 m	10 A
SPAFP, DSAFP	Max. 130 m	10 A

Control wiring

(C) Inter-unit (between outdoor and indoor units) control wiring	(D) Remote control wiring	(E) Control wiring for group control
0.75 mm ² (AWG #18) Use shielded wiring*	0.75 mm ² (AWG #18) Use shielded wiring	0.75 mm ² (AWG #18) Use shielded wiring
Max. 1,000 m	Max. 500 m	Max. 500 m (Total)

NOTE

* With ring-type wire terminal.

● Wiring System Diagrams

NOTE

- (1) Refer to the section “Recommended Wire Length and Wire Diameter for Power Supply System” for the explanation of “A,” “B,” “C,” “D,” and “E,” in the above diagram.
- (2) The basic connection diagram of the indoor unit at right shows the 7P terminal board, so the terminal board in your equipment may differ from the diagram.
- (3) The refrigerant Circuit (R.C.) address should be set before turning the power on.

7P terminal board

SPAFP Type

DSAFP Type

MAFP Type

CAUTION

- (1) When linking outdoor units in a network (S-net link system), disconnect the terminal extended from the short plug (CN003, 2P Black, location: right bottom on the outdoor main control PCB) from all outdoor units except any one of the outdoor units.
(When shipping: In shorted condition.)

Otherwise the communication of S-net link system is not performed. For a system without link (no connection wiring between outdoor units), do not remove the short plug.

- (2) Do not install the inter-unit control wiring in a way that forms a loop.

- (3) Do not install inter-unit control wiring such as star branch wiring. Star branch wiring causes mis-address setting.

- (4) If branching the inter-unit control wiring, the number of branch points should be 16 or fewer.
(Branches less than 1 m are not included in the total branch number.)

- (5) Use shielded wires for inter-unit control wiring (C) and ground the shield on both sides, otherwise misoperation from noise may occur. Connect wiring as shown in the section “Wiring System Diagrams.”

WARNING

Loose wiring may cause the terminal to overheat or result in unit malfunction. A fire hazard may also exist. Therefore, ensure that all wiring is tightly connected.

When connecting each power wire to the terminal, follow the instructions on “How to connect wiring to the terminal” and fasten the wire securely with the fixing screw of the terminal plate.

How to connect wiring to the terminal

■ For stranded wiring

- (1) Cut the wire end with cutting pliers, then strip the insulation to expose the stranded wiring about 10 mm and tightly twist the wire ends.
- (2) Using a Phillips head screwdriver, remove the terminal screw(s) on the terminal plate.
- (3) Using a ring connector fastener or pliers, securely clamp each stripped wire end with a ring pressure terminal.
- (4) Place the ring pressure terminal, and replace and tighten the removed terminal screw using a screwdriver.

2. PROCESS AND FUNCTIONS

2-1. Control Functions 2 - 2

2-2. Outdoor Unit Control PCB 2 - 5

2-3. Indoor Unit Control PCB Switches and Functions2 - 9

2-1. Control Functions

Electronic control valve control

Opening of the electronic control valve is controlled so that the appropriate operating conditions are maintained, based on the signal from each sensor (discharge temperature [TD], intake temperature [TS], outdoor heat exchanger temperature [C1], and indoor heat exchanger temperature [E1, E2]).

Discharge temperature release control

- (1) This control lowers the operating frequency of the compressor when electronic control valve control is unable to maintain the appropriate operating conditions because the discharge temperature fails to decline or because there is a sudden increase in the discharge temperature.
- (2) If the discharge temperature exceeds 111°C, the compressor is stopped and then restarted. (Error count = 1)
- (3) The error count is cleared when operation has continued for 10 minutes after the compressor was restarted.
- (4) If (2) repeats 4 times without the error count being cleared (error count = 4), alarm "P03" occurs.

Current release control

The compressor operating frequency is controlled so that the current that is input to the inverter compressor does not exceed the designated value (control value).

Outdoor unit fan control

1. Cooling fan control

- (1) The outdoor unit fan minimum speed and maximum speed are determined according to the outdoor air temperature and the operating frequency. The speed is controlled in stages between the minimum speed and maximum speed, based on the outdoor heat exchanger temperature (C2) at that time.
- (2) For 60 seconds after start, the outdoor unit fan operates at maximum speed, as determined by the outdoor air temperature and operating frequency at that time.
Subsequently, the fan operates at low speed until the outdoor heat exchanger temperature (C2) rises.
- (3) If the discharge temperature (TD) sensor is abnormal or has become disconnected, the fan will not operate and a protective device is activated.

2. Heating fan control

- (1) The outdoor unit fan minimum speed and maximum speed are determined according to the outdoor air temperature and operating frequency. The speed is controlled in stages between the minimum speed and maximum speed, based on the outdoor heat exchanger temperature (C1) at that time.

- (2) If the outdoor heat exchanger temperature (C2) is 24°C or higher continuously for 5 minutes, fan operation may stop (same conditions as when the thermostat is OFF). In this case, the fan will restart after 3 minutes.
- (3) This control is not performed during the 3 minutes after start, for 1 minute after defrost ends, and while defrost is in progress.

Coil heating control

- (1) This control applies current to the coil of the stopped compressor to heat the compressor in place of the crank case heater.
- (2) When the discharge temperature (TD) is less than 25°C, the current application judgment is made based on the outdoor air temperature (TO).
 - Current application starts when the outdoor air temperature drops to 15°C or below.
 - Current application stops when the outdoor air temperature rises above 18°C.

Control for prevention of short intermittent operation

In order to protect the compressor, this control does not allow the compressor to be stopped for 10 minutes after operation starts, even if the thermostat OFF signal is received from the indoor unit.

Control for prevention of high cooling loads

- (1) This control reduces abnormal high-pressure increases during cooling operation.
- (2) If the outdoor heat exchanger temperature (C2) reaches 64°C or above, the compressor is stopped. (Error count = 1)
- (3) 3 minutes after the compressor stops, if the outdoor heat exchanger temperature (C2) is less than 55°C the compressor is restarted. If operation subsequently continues for 10 minutes, the error count is cleared.
- (4) If the outdoor heat exchanger temperature (C2) again reaches 64°C or higher within 10 minutes after the compressor restarts, the compressor is stopped again. (Error count = 2)
- (5) If the above start/stop of the compressor is repeated 10 times (error count = 10), alarm "P20" occurs. At this time, operation stops and does not restart.
- (6) If the compressor has stopped because the outdoor heat exchanger temperature (C2) reached 64°C or higher, and the temperature remains at 64°C or higher for 30 seconds, alarm "P20" occurs even when the error count is less than 10. At this time, operation stops and does not restart.
- (7) For 30 minutes or longer after the compressor restarts, the control value for "current release control" is reduced to 70 – 90%.

Overcurrent protection control

- (1) If the overcurrent protection circuit detects abnormal current, the compressor is stopped. (Error count = 1.) The compressor then restarts after 3 minutes.
- (2) If compressor start/stop is repeated 4 times (error count = 4), alarm "P26," "P29," or "H01" (count = 2 in this case only) occurs. Operation stops and does not restart.

Current release value shift control

- (1) This control is intended to improve compressor reliability by preventing continuous high-frequency operation under overload conditions when the outdoor air temperature is high, and by preventing intermittent operation through "control for prevention of high cooling loads."
- (2) The control value for "current release control" is corrected according to the outdoor air temperature (TO).
Depending on the temperature, the control value is lowered to 55 – 90% for cooling operation, and to 85 – 98% for heating operation.

Freeze prevention (low-temperature release) control

The below control is performed during cooling operation (including dehumidifying operation), using whichever of the indoor heat exchanger temperatures (E1 or E2) is lower. (See the figure below.)

- (1) If a temperature in the "J" area (operating frequency reduction and thermostat OFF area) is detected for 6 minutes, the compressor operating frequency is reduced.
The compressor operating frequency is reduced every 30 seconds as long as the temperature remains within this area.
- (2) If the temperature is in the "K" area (operating frequency increase-prohibit area), the compressor operating frequency is maintained.
- (3) If the temperature is in the "H" area (operating frequency control area), and the outdoor air temperature is less than 32°C, the compressor maximum operating frequency is limited according to the indoor unit fan speed.
- (4) If the temperature is in the "I" area (normal operating area), the compressors operate normally.
- (5) If the temperature is continuously in the "J" area and the compressor operating frequency reaches 0, then temperature A (temperature for changing from "J" area to "H" area) is raised from 5°C to 12°C, and operation continues with the thermostat OFF until the temperature reaches the "H" area.

Heating high-load control

The below control is performed during heating operation, based on the indoor heat exchanger temperature (E2).

- (1) If the temperature is in the "M" area (operating frequency reduction and thermostat OFF area), the compressor operating frequency is reduced. The compressor operating frequency is reduced every 30 seconds as long as the temperature remains within this area.
- (2) If the temperature is continuously in the "M" area, the thermostat turns OFF.
- (3) If the temperature is in the "N" area, operating frequency increases are prohibited.
- (4) If the temperature is in the "L" area, the operating frequency is raised to the original frequency (the frequency prior to frequency reduction) by 6 Hz every 60 seconds.

- * When the compressor turns ON and the E2 temperature rises, the temperature at which the "M" area is first entered is 54°C (36, 48 types) or higher than 51°C (25 type).
If the E1, E2 temperature subsequently falls to the "L" area, the temperature for entering the "M" area is raised to 56°C (36, 48 types) or 52°C (25 type). However if the E1, E2 temperature falls to the "L" area and falls below 30°C, then the temperature for entering the "M" area is changed back to 54°C (36, 48 types) or 51°C (25 type).

Defrost control

(1) Frost detection

1. Outdoor heat exchanger temperature (C1) method
(15-minute mask after operation start)

2. Outdoor air temperature is -13°C or above and outdoor heat exchanger temperature (C1) of -18°C or below is detected continuously for 20 seconds.
3. Outdoor air temperature is below -13°C and outdoor heat exchanger temperature (C1) of below (outdoor air temperature $- 5^{\circ}\text{C}$) is detected continuously for 20 seconds.

(2) Defrost cancel

• Defrost end conditions

1. Outdoor heat exchanger temperature (C1) rises to 12°C or higher.
2. Outdoor heat exchanger temperature is 7°C or higher continuously for 1 minute.
3. Defrost time of 10 minutes has elapsed.

(3) Startup operation

After defrost ends, the compressors and outdoor unit fan stop for approximately 40 seconds, then operation begins in heating mode.

2-2. Outdoor Unit Control PCB

(1) Layout Diagram (GRFP255-365)

2-2. Outdoor Unit Control PCB

(2) Layout Diagram (GRFP485)

2-2. Outdoor Unit Control PCB (AES125PIH)

(3) Explanation of Functions

S001	Push-button switch (black): Automatic address setting switch • If the system address switch (S002: set to 0 at time of shipment) setting is other than “0” (central control), press this switch once to automatically set the addresses at all indoor units which are in the same system, and are connected to that outdoor unit. During automatic address setting, the 2 LEDs (red) on the outdoor unit control PCB blink alternately. (Pressing this switch again stops automatic address setting.) • If automatic address setting is currently in progress at another system that is subject to central control, only LED 1 on the outdoor unit control PCB blinks to indicate that automatic address setting is in progress at another unit. If automatic address setting is in progress at another unit, automatic address setting cannot be started at this unit, even if S001 is pressed.																	
S002	Rotary switch (10 positions, black): System address setting switch • This switch is set to 0 (1 system control) at the time of shipment. However the address for each system must be set when multiple systems are controlled or when central control is used. (Figure 1) • If the system address is set to 0, automatic address setting is started when the power is turned ON. Therefore it is not necessary to use switch SW01 and perform automatic address setting in the case of single or simultaneous-operation multi control of a single system. • When using central control for multiple systems, a maximum of 30 systems (maximum 64 units) can be connected. In the case of group control or central control, set the system address to a setting other than 0 (1 or above). • If the number of systems is greater than 9, this switch can be used in combination with DIP switch S003 to set up to 30 systems. The setting can be made as high as 39, however all settings above 30 are handled as 30 for control. (For details, refer to Table 1.) • If system addresses are duplicated (the same address exists more than once), LED 1 on the outdoor unit control PCB lights up, and alarm “L04” is displayed on the remote controller.																	
S003	DIP switch (2P, blue): System address 10s-digit and 20s-digit place setting switch • When setting 10 systems or more, set this switch in combination with S002. • For 10 – 19 systems, set 1P (10s-digit place) to ON. • For 20 – 29 systems, set 2P (20s-digit place) to ON, and set 1P (10s-digit place) to OFF. • For 30 systems, set both 1P (10s-digit place) and 2P (20s-digit place) to ON. (For details, refer to Table 1.)																	
S005	Refrigerant recovery switch (red button switch) • Press this switch to perform refrigerant recovery control using cooling operation. The indoor unit fan will operate at HIGH and 55 Hz for a maximum of 10 minutes. When refrigerant recovery is completed, close the valves and press this switch to stop the operation.																	
Test (CN036)	2P plug (red): Pin used for PCB inspection at the factory																	
EXCT (CN026)	3P plug (red): Can be used for demand control • The operating ranges are shown in the table. <table><tr><th colspan="2">Short-circuited</th><th rowspan="2">Operating range</th></tr><tr><th>2P and 3P</th><th>1P and 3P</th></tr><tr><td>0</td><td>0</td><td>100%</td></tr><tr><td>0</td><td>1</td><td>75%</td></tr><tr><td>1</td><td>0</td><td>50%</td></tr><tr><td>1</td><td>1</td><td>0%</td></tr></table>	Short-circuited		Operating range	2P and 3P	1P and 3P	0	0	100%	0	1	75%	1	0	50%	1	1	0%
Short-circuited		Operating range																
2P and 3P	1P and 3P																	
0	0	100%																
0	1	75%																
1	0	50%																
1	1	0%																

Terminal plug (CN015)

3P plug (black): Terminal plug for the communications line

- At the time of shipment from the factory, the short-circuiting socket (2P, black) is installed between pins 1 and 2 on the terminal plug (terminal = yes).
- When central control is used for multiple systems, leave the short-circuiting socket in place only on the outdoor unit with a system address of 1. At all other outdoor units (other than unit No. 1), move the short-circuiting socket to between 2 and 3 (terminal = no). If multiple short-circuiting sockets remain in place during central control, a communications failure will occur.
- In the case of a single system only (system address = 0), do not remove the short-circuiting socket. (Alarm "E04" will occur.)

Quiet mode (CN028)

2P plug (white): Enables operation in quiet mode.

- The outdoor unit fan and compressor frequencies are subject to limits during operation.
- Low-noise operation is enabled when the relay is turned ON.
 - Example of wiring

Outdoor unit control PCB

Note 1: The maximum length of the wiring between the outdoor unit PCB and the relay is 2 m.

- Lead wire with 2P plug (special-order part: WIRE K/ 623-161-2098)
- Relay, field supply, contact input specifications: DC 5 V, 0.5 mA
(Recommended relay: Fuji Electric HH62SW, compatible with micro contacts)
- Use a commercially available timer (such as the Omron H5 daily time switch).

Table 1. Method of System Address Setting

[S002 (rotary, black), S003 (2P DIP switch, green or blue)]

PCB Settings Section

1. Indoor Unit Control PCB Switches and Functions

[Indoor unit control PCB]

- T10 (CN61-15):** **6P plug (YEL)** / Used for remote control operation. (Refer to the Remote Control Section.)
Control items: (1) Start/stop input (2) Remote controller prohibit input
(3) Start signal output (4) Alarm signal output
- EXCT (CN73-9):** **2P plug (RED)** / Can be used for demand control. When input is present, forces the unit to operate with the thermostat OFF.
- DISP (CN72-10):** **2P plug (WHT)** / Short-circuiting this plug allows operation to be controlled by the remote controller even when an outdoor unit is not connected. (In this case, alarm "E04," which indicates trouble in the serial communication between the indoor and outdoor unit, does not occur.)
- CHK (CN71-11):** **2P plug (WHT)** / Test pin. Short-circuiting this pin allows the indoor FM (H fan speed), drain pump, flap motor (F1 position), and electronic expansion valve full-open position to be checked.
However this function turns OFF if the indoor unit protection mechanism is activated.
The components will operate even if the remote controller and outdoor unit are not connected, however the remote control cannot be used for control even if it is connected. This plug can be used for short-term tests.
- JP1 (J01):** **Jumper wire** / Allows selection of the T10 terminal start/stop signal. (Refer to the Remote Control Section.)
Setting at time of shipment: Pulse signal
Jumper wire cut: Static signal (continuous signal)
- Fan drive (CN32-17):** **2P plug (WHT)** / This terminal sends the signal to the ventilation fan when a commercially available ventilation fan is operated by the FAN button on the wired remote controller. (Refer to the Remote Control Section.)
Use a ventilation fan which can accept the no-voltage contact A signal as the external input signal.
- Filter (CN70-12):** **2P (WHT)** / This terminal is used to connect contact input from the differential-pressure switch, used to detect filter clogging. When the contact is ON, "FILTER" appears on the display of the wired remote controller.
- Power LED:** **LED (RED)** / Illuminates when the power is ON. Flashes when there is trouble with the EEPROM (IC10, IC010: nonvolatile memory).
- EEPROM (IC10-02):** **Nonvolatile memory** / Used to store model information and other data. When replacing the PCB, remove the EEPROM from the old PCB and install it onto the new PCB. If there is IC trouble, replace with a new IC (provided with the servicing PCB), and set the necessary information using the wired remote controller. (For the setting procedure, refer to the servicing technical materials.)
- GRL (CN20):**
- For AC fan motor (CR-TRP50A) – 3P (YEL)
 - For DC fan motor (CR-SRP50A) – 5P (BLU)
- There are 5P, 7P and 8P control PCB types for indoor units.

4-3. Symptoms and Parts to Inspect

Remote controller alarm display	Alarm contents	Judgment condition	Clear condition	Judgment and correction
P03	Abnormal discharge temperature • Discharge temp. detected at or above the specified value.	Stops when temp. exceeds 111°C.	Recovery at restart	1. Check refrigerant cycle (gas leak). 2. Electronic control valve trouble 3. Check tubing sensor (TD).
P05	Missing phase detected. (CT disconnected or AC power trouble)	Current value sent from MDC on outdoor unit control PCB is low. No AC power input for 3 minutes or longer: pre-trip - 5	Recovery at restart	1. Check R/S/T power. 2. Check inverter control PCB. 3. Check outdoor unit control PCB.
P15	Insufficient gas level detected.	The following conditions continue for 1 minute. • Discharge temp. is 95°C or higher. • Electronic control valve is at step 480. • Current value from MDC is 1.7 A (3-phase) or 1.0 A (1-phase) or less.	Recovery at restart	Check refrigerant cycle (gas leak).
P19	4-way valve locked • Judgment occurs after compressor has been ON for 5 minutes.	Indoor heat exchanger temp. drops although compressors are ON in heating mode: [min(E1, E2)] ≤ 10°C. Indoor heat exchanger temp. rises although compressors are ON in cooling mode: E2 ≥ 40°C	Recovery at restart	1. Check 4-way valve. 2. Check 4-way valve wiring. 3. Check outdoor unit control PCB.
P20	High-pressure protection trouble detected from cooling high-load C2 temp.	Temp. exceeds 64°C and subsequently does not drop to 55°C or below. • Continuously for 30 seconds → Alarm is output when this occurs once. • Continuously for less than 30 seconds → Inverter stops.	Recovery at restart	1. Refrigerant cycle overload operation 2. Outdoor coil temperature sensor C2
P22	Outdoor unit fan motor trouble • Inverter protection circuit was activated, or lock was detected, at outdoor unit fan motor.	Inverter stops after alarm is detected	Recovery at restart	1. Position detection trouble 2. Overcurrent protection circuit at outdoor unit fan motor was activated. • Check outdoor unit control PCB. • Refer to outdoor unit fan judgment methods.
P26	Inverter protection circuit was activated, or G-Tr short-circuit (short time: 0.8 s or less) in inverter control	Inverter stops after alarm is detected. Alarm is output when inverter stops (pre-trip) consecutively 4 times.	Recovery at restart	1. Stops immediately when restarted. • Layer short in the compressor 2. Check inverter control PCB. • Wiring trouble

Remote controller alarm display	Alarm contents	Judgment condition	Clear condition	Judgment and correction
P29	Current detection circuit trouble • AC current value is high even when compressor is stopped.	Inverter stops after alarm is detected. Alarm is output when inverter stops (pre-trip) consecutively 4 times.	Recovery at restart	1. Stops immediately when restarted. • Layer short in the compressor 2. Check inverter control PCB. • Wiring trouble
	Compressor motor output trouble, Inverter compressor trouble, MDC trouble	Inverter stops after alarm is detected.	Recovery at restart	1. Refrigerant cycle trouble, overload operation 2. Loose screws and contact failure between HIC control PCB and radiating plate 3. Cooling failure of radiating plate 4. Check outdoor unit PCB wiring.
	Compressor does not run. (Overcurrent protection circuit activates after a certain period of time following compressor start.)	Inverter stops after alarm is detected.	Recovery at restart	1. Compressor trouble (locked, etc.) • Replace the compressor. 2. Compressor wiring trouble (missing phase)
	Compressor breakdown • Starts to operate but operating frequency drops and compressor stops.	Inverter stops after alarm is detected.	Recovery at restart	1. Check power voltage: AC 200 V $\pm$ 20 V. 2. Refrigerant cycle overload operation 3. Check AC current detection circuit.
	Inverter control PCB position detection circuit trouble	Inverter stops after alarm is detected.	Recovery at restart	Position detection circuit is activated even when the compressor 3P connector is disconnected and the compressor operated. • Replace the inverter control PCB.
F04	Disconnection, open circuit, or short circuit in discharge temp. sensor (TD)	Sensor detection trouble (90°C or higher when 15 minutes have elapsed after compressor stopped). (Open circuit)	Automatic recovery	1. Check discharge temp. sensor (TD). 2. Check outdoor unit control PCB.
F06	Disconnection, open circuit, or short circuit in outdoor heat exchanger temp. sensor (C1)	Open circuit or short circuit	Automatic recovery	1. Check outdoor heat exchanger temp. sensor (C1). 2. Check outdoor unit control PCB.
F07	Disconnection, open circuit, or short circuit in outdoor heat exchanger temp. sensor (C2)	Open circuit or short circuit	Automatic recovery	1. Check outdoor heat exchanger temp. sensor (C2). 2. Check outdoor unit control PCB.
F08	Disconnection, open circuit, or short circuit in outdoor air temp. sensor (TO)	Open circuit or short circuit	Automatic recovery	1. Check outdoor air temp. sensor (TO). 2. Check outdoor unit control PCB.
F12	Disconnection, open circuit, or short circuit in intake temp. sensor (TS)	Open circuit or short circuit	Automatic recovery	1. Check intake temp. sensor (TS). 2. Check outdoor unit control PCB.

Remote controller alarm display	Alarm contents	Judgment condition	Clear condition	Judgment and correction
F31	EEPROM trouble	Reading/writing failure	Recovery at power reset	1. Check EEPROM (IC901). 2. Check outdoor unit control PCB.
L02	Mismatch of indoor and outdoor unit types (Espacio, Multi, GHP)	Indoor unit judges that type does not match outdoor unit type.	Recovery at power reset	1. Check indoor unit EEPROM. 2. Check indoor unit control PCB.
L04	Settings failure	Duplicated outdoor unit address (system address)	Automatic recovery	1. Check outdoor unit system address. 2. Check inter-unit control wiring.
L07	Settings failure	Group control wiring is connected to an independent-control indoor	Recovery at power reset	1. Check inter-unit control wiring. 2. Check indoor unit EEPROM.
L10	Settings failure	Outdoor unit capacity not set.	Recovery at power reset	Check outdoor unit EEPROM.
L13	Indoor-outdoor unit types	Outdoor unit judges that type does not match indoor unit type.	Recovery at power reset	1. Check indoor unit EEPROM. 2. Check outdoor unit control PCB.
E06	Outdoor unit detected abnormal signal from indoor unit.	Serial signal receiving failure (including failure to verify No. of units)	Automatic recovery	1. Check inter-unit control wiring. 2. Check outdoor unit
E07	Outdoor unit sending failure to indoor unit	Serial signal sending failure	Automatic recovery	1. Check inter-unit control wiring. 2. Check outdoor unit control PCB.
E14	Settings failure	Duplicated master unit in simultaneous-operation multi control (Detected by outdoor unit)	Recovery at power reset	1. Check inter-unit control wiring. 2. Check indoor unit combination.
E15	Automatic address setting failure	Indoor unit capacity too low.	Recovery at power reset	1. Check inter-unit control wiring. 2. Check outdoor unit control PCB.
E16	Automatic address setting failure	Indoor unit capacity too high.	Recovery at power reset	1. Check inter-unit control wiring. 2. Check outdoor unit control PCB.
E20	Automatic address setting failure	Outdoor unit cannot receive any serial signals from indoor units.	Recovery at power reset	1. Check inter-unit control wiring. 2. Check outdoor unit control PCB.
E31	Communications trouble within unit	No communication possible with MDC for 3 minutes or longer.	Automatic recovery	Check outdoor unit control PCB.
H01	Overcurrent	Inverter stops after alarm is detected.	Recovery at restart	1. Refrigerant cycle trouble, overload operation 2. Loose screws between HIC control PCB and radiating plate 3. Cooling failure of radiating plate 4. Check outdoor unit PCB wiring.

4-4. Details of Alarm Messages

(2) [Alarm "P26"] — IGBT short-circuit protection on inverter control (IPDU) PCB
HIC PCB trouble)

**CR-HIC280A
(125 Type)**

**CR-HIC80A
(71, 100 Type)**

Resistance

Between terminals	Resistance
HIC + — HIC –	200 kΩ or more
HIC + — U	300 kΩ or more
HIC + — V	300 kΩ or more
HIC + — W	300 kΩ or more
HIC – — U	200 kΩ or more
HIC – — V	200 kΩ or more
HIC – — W	200 kΩ or more

**(3) [Alarm “E31”]
(communications
trouble within unit)**

(4) [Alarm "P22"] Outdoor unit fan motor drive circuit trouble

Note:
In the case of a GND circuit failure inside the motor, the results of the above check may be OK.
If operation is not OK after the outdoor unit control PCB has been replaced, then replace the outdoor unit fan motor.

(5) [Alarms “F04,” “F06,” “F07,” “F08,” “F12”] ——— Sensor trouble

Sensor Temperature Display Function (Displayed both when operating and stopped)

- The below check procedure can be used to display all remote controller, indoor unit, and outdoor unit sensor temperatures.

<Check procedure>

- (1) Press and hold the  button and  button simultaneously for 4 seconds or longer.
- (2) Unit No. X-X (main unit No.), item code XX (sensor address), and service monitor 00XX (sensor temperature) appear on the remote controller LCD. (See figure.)
- (3) Press the temperature setting  and  buttons and change the item code to the sensor address of the sensor that you want to monitor.
(For the relationship between the sensor address and the sensor type, refer to the below Sensor Temperature Correlation Table.
- (4) During group control and simultaneous-operation multi control, press the  button and change to the unit that you want to monitor.
- (5) Press the  button to return to normal remote controller operation.

Figure: Sample display when discharge temperature at unit No. 1-1 is 85°C

NOTE

The temperature display reads “- - - -” for units that are not connected.

- * If monitor mode is selected during normal operation, the only parts of the LCD that change are those shown in the figure.
All other displays do not change, and remain as they were during normal operation.

Sensor Temperature Correlation Table

Sensor installation location	Sensor address	Sensor type	Sensor address	Sensor type
Indoor unit	00	Room temp. (temp. used for control)*	05	—
	01	Remote controller temp.	06	Discharge temp.
	02	Indoor intake temp.	07	—
	03	Indoor heat exchanger temp. (E1)	08	—
	04	Indoor heat exchanger temp. (E2)	09	—
Outdoor unit	0A	Discharge temp. (TD)	12	—
	0b	—	13	—
	0C	—	14	Current (AC current)
	0d	Intake temp. (TS)	15	Outdoor electronic control valve position
	0E	Outdoor heat exchanger temp. (C1)	16	—
	0F	Outdoor heat exchanger temp. (C2)	17	—
	10	—	18	—
	11	Outdoor air temp.	19	—

* Main unit only when group control is enabled

Check Pin

Short-circuit the cooling check pin (or heating check pin) on the outdoor unit control PCB to perform the control described below.

1. Thermistor checks

The checks listed below are performed for 1 second each, in order from the top down. The results are displayed by LED 1 and 2.

Thermistor	Check results	
	Normal	Abnormal
Discharge temp. (TD)	LED 1 lit	LED 1 and 2 OFF
Outdoor air temp. (TO)	LED 2 lit	
Heat exchanger temp. (C1)	LED 1 lit	
Heat exchanger temp. (C2)		
Intake temp. (TS)	LED 1 lit	

2. 4-way valve turns ON for 1 second.

3. Forced cooling (or heating) operation

4-5. Table of Thermistor Characteristics

(1) Outdoor Air Temp. (TO), Intake Temp. (TS), Heat Exchanger Temp. (C1) Sensor, Heat Exchanger Temp. (C2) Sensor

(2) Discharge Temp. (TD) Sensors

5. OUTDOOR UNIT MAINTENANCE REMOTE CONTROL

5-1. Overview 5 - 2

5-2. Functions 5 - 2

5-3. Normal Display Operations and Functions 5 - 3

5-4. Monitoring Operations: Display of Indoor Unit and Outdoor Unit Sensor
Temperatures 5 - 6

5-5. Monitoring the Outdoor Unit Alarm History: Display of Outdoor Unit Alarm
History 5 - 7

5-6. Settings Modes: Setting of Outdoor Unit EEPROM 5 - 7

5-1. Overview

What is the outdoor unit maintenance remote controller?

Beginning with the DC-INV series of outdoor units, nonvolatile memory (EEPROM) is used in the outdoor unit PCB. In this way, the setting switches that were located on earlier PCBs have been converted to EEPROM data. This remote controller is an outdoor unit maintenance tool that is used to make and change the EEPROM settings. This remote controller can be used for checking the outdoor unit EEPROM settings and contents, and also can be used to monitor the outdoor unit alarm history and indoor/outdoor unit temperatures, and to check the status of the indoor unit connections (No. of units, operating status, etc.).

Note: Because this tool does not function as a remote controller, it is used only during test runs and servicing.

REM HW

System diagram

- * The special service checker wiring is required in order to connect the outdoor unit maintenance remote controller to the outdoor unit PCB.
- * Even when the outdoor unit maintenance remote controller is connected, a separate remote controller or other control device must be connected to the indoor unit.

5-2. Functions

■ Normal display functions

- (1) Functions: Button operations can be used to perform the following functions.
 - Start/stop of all indoor units
 - Switching between cooling and heating
 - Test run of all indoor units
 - High-speed operation of indoor units (Do not use with actual units. This may damage the devices.)
 - (2) Display: The following can be displayed.
 - Alarm details display
 - No. of indoor/outdoor units
 - Unit Nos. of connected indoor/outdoor units
 - Indoor/outdoor unit operating status (blinks when an alarm occurs)
 - Indoor unit thermostat ON
 - Individual display of outdoor unit alarms
 - Outdoor unit compressor total operating time
 - Outdoor unit oil sensor oil level
 - Outdoor unit total power ON time
 - Outdoor unit microcomputer version
 - Other
- Temperature monitor
 - Displays the indoor/outdoor unit sensor temperatures.
 - Outdoor unit alarm history monitor
 - Displays the outdoor unit alarm history.
 - Settings modes
 - Settings mode 1 and settings mode 2 are used to make the outdoor EEPROM settings.

5-3. Normal Display Operations and Functions

■ Normal display functions

- Connect the special service checker wiring to the outdoor unit PCB.
The connection is shown in the figure below.

- * It is not necessary to disconnect the communications line in the inter-unit control wiring if it has already been connected at this time.
- * Settings modes 1 and 2 can be used even when the outdoor unit is independent (when 1 maintenance remote controller is connected to 1 outdoor unit and automatic address setting for the indoor units has not been completed).
- * Displays the overall system status for that refrigerant system.

● All units start/stop (Fig. 1)

<Operation>

The  button can be used to start and stop all the indoor units.

- The LED turns ON when 1 or more indoor units is operating.
- The LED blinks when an alarm has occurred at 1 or more indoor units during operation.

● Switching between cooling/heating (Fig. 1)

<Operation>

The  button switches between heating and cooling modes.

- The specifications are equivalent to the heating/cooling input that was present on earlier outdoor unit PCBs.
- The display shows the operating mode of the indoor unit with the lowest number.

● All units test run (Fig. 2)

<Operation>

The  button switches test run ON/OFF for all indoor units.

- Press and hold for 4 seconds to turn ON.
“Test run” is displayed while the test run is in progress.
- Conditions of test runs that are started from the unit remote controller are not displayed on the outdoor unit maintenance remote controller.

● High-speed operation (Fig. 3)

- Do not use with actual units. (The devices may be damaged.)

<Operation>

The time  button changes between high-speed operation and normal operation.

- During high-speed operation, the “repeat” timer mark  is displayed.

Fig. 1

Fig. 2

Fig. 3

■ Display (functions)

- Use the temperature setting  and  buttons to change the item code.

Item code	Display contents	Remarks
00 (1)	Outdoor unit alarm contents (code): OFF when normal Blinking 8-alarm code display at pre-trip, LED (2)	At initial status
01	No. of indoor units connected in that refrigerant system	
02	Unit. Nos. of connected indoor units in that refrigerant system *2	
03	Operating status of indoor units in that refrigerant system (blinks when alarms occur) *2	
04	Unit Nos. of indoor units in that refrigerant system where the thermostats are ON *2	
05	No. of outdoor units connected in that refrigerant system	No. of connected units: 1
06	Unit Nos. of connected outdoor units in that refrigerant system *2	
07	Operating status of outdoor units in that refrigerant system (blinks when alarms occur) *2

FE	Outdoor unit microcomputer firmware version	
FF	Outdoor unit microcomputer software version	

(3) XX-YY system

Displays the outdoor unit address of the selected outdoor sub-bus.

XX = Main bus line outdoor system address (1 – 30)

YY = Outdoor unit address in outdoor sub-bus (1 – 8). This is “1” when there is only 1 outdoor unit.

* See following page for *2 and *3.

<Sample displays>

01: <No. of connected indoor units>
4 units connected

02: <Unit Nos. 1, 2, 3, and 4 are connected>

Locations where (1), (2), and (3) are displayed are shown below.

***2:** 7-segment, 4-digit display for remote controller timer display

The connected unit Nos. are displayed as shown below, using the 7-segment 4-digit (**88 : 88**) display and the colon.

- Display for unit Nos. 1 – 20

- Display for unit Nos. 21 – 40

- The meaning of the colon display changes in the same way, allowing unit Nos. up to 80 to be displayed.

- Sample displays of the unit Nos. of connected indoor units

- Display of unit No. 1

- Display of unit Nos. 1 and 2

- Display of unit Nos. 1, 2, and 3

- Display of unit Nos. 1, 2, 3, and 4

NOTE

The colon display changes automatically every 10 seconds.

(The display does not change if higher unit numbers do not exist.)

Pressing the button switches the display immediately to the next higher level, even if 10 seconds have not passed.

***3:** The total compressor operating time is displayed (in 1-hour units) using 8 digits.

- When the first 4 digits are displayed, the top point of the colon is lit.
- When the last 4 digits are displayed, the colon points are not lit.
- The display of the first 4 and last 4 digits changes automatically every 10 seconds. It can also be changed by pressing the button.

10: <Total compressor operating time>

(A) and (B) are displayed alternately.

NOTE

With the outdoor unit maintenance remote controller (when connected to the outdoor unit), the unit remote controller check functions will not operate.

5-4. Monitoring Operations: Display of Indoor Unit and Outdoor Unit Sensor Temperatures

<Operating procedure>

- (1) Press and hold the  button and  button simultaneously for 4 seconds or longer to switch to temperature monitor mode.
During temperature monitoring, “Service Monitor” is lit.
(The display and operations are the same as when monitor mode is started from the unit remote controller.)
 - (2) Press the  button and select the indoor unit to monitor.
 - (3) Use the temperature setting  and  buttons to select the item code of the temperature to monitor.
The selected indoor unit No. and the temperature data are displayed.
 - (4) To end monitoring, press the  button. The display returns to the normal display.
- * The display does not blink.

	Item code	Meaning of Code
Indoor unit data	02	Indoor unit intake temp.
	03	Indoor unit heat exchanger temp. (E1)
	04	Indoor unit heat exchanger temp. (E2)
	05	Indoor unit heat exchanger temp. (E3)
	06	Indoor unit discharge temp.
	07	—
	08	—
	09	
Outdoor unit data	0A	Discharge temp. (TD)
	0b	—
	0C	—
	0d	Intake temp. (TS)
	0E	Outdoor unit heat exchanger temp. (C1)
	0F	Outdoor unit heat exchanger temp. (C2)
	10	—
	11	Outdoor air temp. (TO)
	12	Heat sink temperature
	13	—
	14	Current value
	15	Outdoor MV value
	19	Frequency

* Depending on the model, some items may not be displayed.

5-5. Monitoring the Outdoor Unit Alarm History: Display of Outdoor Unit Alarm History

- * Displays outdoor unit alarms only. Does not display indoor unit alarms.
- * Check the indoor unit alarm histories separately using the indoor unit remote controllers or other control device.

<Operating procedure>

- (1) Press and hold the  button and  button simultaneously for 4 seconds or longer to change to outdoor unit alarm history mode. During the alarm history display, "Service Check" is lit. The display and operations are the same as the monitoring of the alarm device history that is performed using the unit remote controller. However, the outdoor unit address appears instead of the unit No.
↓
- (2) Press the  button and select the outdoor unit for alarm history monitoring.
↓
- (3) Use the temperature setting  and  buttons to select the item code for the alarm history. The display shows the address of the selected outdoor unit, the item code, and the alarm history (alarm data). The outdoor unit address is displayed as system XX-YY.
System XX = Outdoor unit system address
YY = Outdoor unit sub-bus address
The item code is displayed as 01 – 08. 01 indicates the most recent alarm. The alarm history is indicated by the alarm code. (If there have been no alarm codes, "----" is displayed.)
↓
- (4) To clear the alarm history, press the  button. (The outdoor unit alarm history will be cleared.)
↓
- (5) To end, press the  button. The display returns to the normal remote controller display.

5-6. Settings Modes: Setting the Outdoor Unit EEPROM

● Setting mode 1

<Operating procedure>

- (1) Press and hold the  button and  button simultaneously for 4 seconds or longer.
- (2) Use the temperature setting  and  buttons to change the item code. The item codes and setting data are shown in the table on the next page.
- (3) Use the timer time  and  buttons to change the setting data. To confirm the changed setting data, press the  button. (At this time, "Setting" stops blinking and remains lit.)
- (4) During this mode, "Setting" is displayed, blinking. The outdoor unit address display section displays "ALL," the item code and number (DN value in the table), and the setting data (6 digits). (The setting data is displayed in 6 digits. The display changes between the first 3 digits (Fig. ①) and the last 3 digits (Fig. ②). When the first 3 digits are displayed, the top point of the colon is lit.)
- (5) To end the setting mode, press the  button.

② Display of last 3 digits

① and ② are displayed alternately. (Example shows display of 000 001.)

List of Item Codes

Item code	Parameter		
01	Control system schedule		
02	Control system schedule		
03	Control system schedule		
04	Snowfall sensor operation	0 = No sensor, control performed 1 = No sensor, control not performed 2 = Sensor present, control performed 3 = Sensor present, control not performed	
05	Outdoor fan quiet mode	0 = Disabled	1 = Quiet mode
06	Defrost fan speed selection	0 = Disabled 1 = LL fan speed (This function is not present with the DC-INV.)	
07	Ignore capacity	0 = Disabled	1 = Ignores capacity ratio
08	Control system schedule		
09	Control system schedule		
0A	Control system schedule		
0b	Control system schedule		
0C	Forced operation of indoor unit drain pump	0 = Disabled 1 = During cooling only, 2 hours stopped + 20 minutes operating (regardless of whether the unit is running or stopped) 2 = During cooling only, 4 hours stopped + 20 minutes operating (regardless of whether the unit is running or stopped) 3 = At all times, 4 hours stopped + 20 minutes operating 4 = At all times, 2 hours stopped + 20 minutes operating	
0d	Odor countermeasure when indoor cooling thermostat is OFF	0 = Disabled	1 = Odor countermeasure is active
0E	Cool only	0 = Heat pump	1 = Cool only
0F	Control system schedule		
10	Control system schedule		
11	Multi-floor installation	0 = No	1 = Yes
12	Control system schedule		
13	Control system schedule		
50	Demand 1	40%, 45% ... 100% ... 160%	
51	Demand 2	40%, 45% ... 100% ... 160%	
52	Current control level	40%, 45% ... 100% ... 160%, -1 (no control)	

* Figures in parentheses indicate the data at the time of shipment from the factory.

● Settings mode 2

<Operating procedure>

- (1) Press and hold the  button,  button, and  button simultaneously for 4 seconds or longer.
- (2) Use the temperature setting  and  buttons to change the item code. The item codes and setting data are shown in the table below.
- (3) Use the timer time  and  buttons to change the setting data. To confirm the changed setting data, press the  button. (At this time, “Setting” stops blinking and remains lit.)
- (4) During this mode, “Setting” is displayed, blinking. The display shows the set outdoor unit address “System XX-YY” (System XX = System address, YY = Address at outdoor unit sub-bus), item code number (DN value in the table below), and the setting data (6 digits). (The setting data is displayed in 6 digits. The display changes between the first 3 digits (Fig. ㉑) and the last 3 digits (Fig. ㉒). When the first 3 digits are displayed, the top point of the colon is lit.)
- (5) To end the setting mode, press the  button. The display returns to the normal display mode.

80: <Refrigerant type> ㉑ and ㉒ are displayed alternately. (Example shows 000 410 (R410A).)

List of Item Codes

Item code	Parameter	
80	Refrigerant type	407 = R407C 22 = R22 410 = R410A
81	Outdoor unit capacity*	0 = Disabled 22 25 28 32 36 40 45 50 56 63 71 80 90 100 112 125 140 160 180 200 224 250 280 340 355 400 450 500 560 600 630 670 710 800 840
82	Control system schedule	
83	Control system schedule	
84	3-phase or single-phase	0 = 3-phase 1 = single-phase
85	Power frequency	0 = Disabled 1 = 50 Hz
86	Control system schedule	
87	Control system schedule	
88	Control system schedule	
89	Control system schedule	
8A	Control system schedule	
8b	Control system schedule	
8E	Control system schedule
